| <b>Total Number of Contact Hours</b>  | 50            | <b>Exam Hours</b> | 03                   |
| <b>CREDITS –4</b>   |               |                   |                      |
| <b>Course Learning Objectives:</b> This course (18CS32) will enable students to:  |               |                   |                      |
| <ul style="list-style-type: none"> <li>• Explain fundamentals of data structures and their applications essential for programming/problem solving.</li> <li>• Illustrate linear representation of data structures: Stack, Queues, Lists, Trees and Graphs.</li> <li>• Demonstrate sorting and searching algorithms.</li> <li>• Find suitable data structure during application development/Problem Solving.</li> </ul>  |               |                   |                      |
| <b>Module 1</b>   |               |                   | <b>Contact Hours</b> |
| <b>Introduction:</b> Data Structures, Classifications (Primitive & Non Primitive), Data structure Operations, Review of Arrays, Structures, Self-Referential Structures, and Unions. Pointers and Dynamic Memory Allocation Functions. Representation of Linear Arrays in Memory, Dynamically allocated arrays.<br><b>Array Operations:</b> Traversing, inserting, deleting, searching, and sorting. Multidimensional Arrays, Polynomials and Sparse Matrices.<br><b>Strings:</b> Basic Terminology, Storing, Operations and Pattern Matching algorithms. Programming Examples.<br><b>Textbook 1: Chapter 1: 1.2, Chapter 2: 2.2 - 2.7 Textbook 2: Chapter 1: 1.1 - 1.4, Chapter 3: 3.1 - 3.3, 3.5, 3.7, Chapter 4: 4.1 - 4.9, 4.14 Reference 3: Chapter 1: 1.4</b><br><b>RBT: L1, L2, L3</b> |               |                   | 10                   |
| <b>Module 2</b>   |               |                   |                      |
| <b>Stacks:</b> Definition, Stack Operations, Array Representation of Stacks, Stacks using Dynamic Arrays, Stack Applications: Polish notation, Infix to postfix conversion, evaluation of postfix expression.<br><b>Recursion</b> - Factorial, GCD, Fibonacci Sequence, Tower of Hanoi, Ackerman's function.<br><b>Queues:</b> Definition, Array Representation, Queue Operations, Circular Queues, Circular queues using Dynamic arrays, Dequeues, Priority Queues, A Mazing Problem. Multiple Stacks and Queues. Programming Examples.<br><b>Textbook 1: Chapter 3: 3.1 -3.7 Textbook 2: Chapter 6: 6.1 -6.3, 6.5, 6.7-6.10, 6.12, 6.13</b><br><b>RBT: L1, L2, L3</b>   |               |                   | 10                   |
| <b>Module 3</b>   |               |                   |                      |
| <b>Linked Lists:</b> Definition, Representation of linked lists in Memory, Memory allocation; Garbage Collection. Linked list operations: Traversing, Searching, Insertion, and Deletion. Doubly Linked lists, Circular linked lists, and header linked lists. Linked Stacks and Queues. Applications of Linked lists – Polynomials, Sparse matrix representation. Programming Examples<br><b>Textbook 1: Chapter 4: 4.1 – 4.6, 4.8, Textbook 2: Chapter 5: 5.1 – 5.10,</b><br><b>RBT: L1, L2, L3</b>   |               |                   | 10                   |
| <b>Module 4</b>   |               |                   |                      |
| <b>Trees:</b> Terminology, Binary Trees, Properties of Binary trees, Array and linked Representation of Binary Trees, Binary Tree Traversals - Inorder, postorder, preorder; Additional Binary tree operations. Threaded binary trees, Binary Search Trees – Definition, Insertion, Deletion, Traversal, Searching, Application of Trees-Evaluation of Expression, Programming Examples   |               |                   | 10                   |

|  |    |
|--|----|
| <b>Textbook 1: Chapter 5: 5.1 –5.5, 5.7; Textbook 2: Chapter 7: 7.1 – 7.9</b><br><b>RBT: L1, L2, L3</b>  |    |
| <b>Module 5</b>  |    |
| <p><b>Graphs:</b> Definitions, Terminologies, Matrix and Adjacency List Representation Of Graphs, Elementary Graph operations, Traversal methods: Breadth First Search and Depth First Search.</p> <p><b>Sorting and Searching:</b> Insertion Sort, Radix sort, Address Calculation Sort.</p> <p><b>Hashing:</b> Hash Table organizations, Hashing Functions, Static and Dynamic Hashing.</p> <p><b>Files and Their Organization:</b> Data Hierarchy, File Attributes, Text Files and Binary Files, Basic File Operations, File Organizations and Indexing</p> <p><b>Textbook 1: Chapter 6 : 6.1 –6.2, Chapter 7:7.2, Chapter 8 : 8.1-8.3</b></p> <p><b>Textbook 2: Chapter 8 : 8.1 – 8.7, Chapter 9 : 9.1-9.3, 9.7, 9.9</b></p> <p><b>Reference 2: Chapter 16 : 16.1 - 16.7</b></p> <p><b>RBT: L1, L2, L3</b></p> | 10 |
| <b>Course Outcomes:</b> The student will be able to :  |    |
| <ul style="list-style-type: none"> <li>• Use different types of data structures, operations and algorithms</li> <li>• Apply searching and sorting operations on files</li> <li>• Use stack, Queue, Lists, Trees and Graphs in problem solving</li> <li>• Implement all data structures in a high-level language for problem solving.</li> </ul>  |    |
| <b>Question Paper Pattern:</b>   |    |
| <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full Question consisting of 20 marks</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>  |    |

**CREDITS – 03**

**Course Learning Objectives:** This course (18CS55) will enable students to

- Learn the syntax and semantics of Python programming language.
- Illustrate the process of structuring the data using lists, tuples and dictionaries.
- Demonstrate the use of built-in functions to navigate the file system.
- Implement the Object Oriented Programming concepts in Python.
- Appraise the need for working with various documents like Excel, PDF, Word and Others.

**Module – 1**

**Teaching Hours**

**Python Basics**, Entering Expressions into the Interactive Shell, The Integer, Floating-Point, and String Data Types, String Concatenation and Replication, Storing Values in Variables, Your First Program, Dissecting Your Program, **Flow control**, Boolean Values, Comparison Operators, Boolean Operators, Mixing Boolean and Comparison Operators, Elements of Flow Control, Program Execution, Flow Control Statements, Importing Modules, Ending a Program Early with sys.exit(), **Functions**, def Statements with Parameters, Return Values and return Statements, The None Value, Keyword Arguments and print(), Local and Global Scope, The global Statement, Exception Handling, A Short Program: Guess the Number

**Textbook 1: Chapters 1 – 3**

**RBT: L1, L2**

08

**Module – 2**

**Lists**, The List Data Type, Working with Lists, Augmented Assignment Operators, Methods, Example Program: Magic 8 Ball with a List, List-like Types: Strings and Tuples, References, **Dictionaries and Structuring Data**, The Dictionary Data Type, Pretty Printing, Using Data Structures to Model Real-World Things, **Manipulating Strings**, Working with Strings, Useful String Methods, Project: Password Locker, Project: Adding Bullets to Wiki Markup

**Textbook 1: Chapters 4 – 6**

**RBT: L1, L2, L3**

08

**Module – 3**

**Pattern Matching with Regular Expressions**, Finding Patterns of Text Without Regular Expressions, Finding Patterns of Text with Regular Expressions, More Pattern Matching with Regular Expressions, Greedy and Nongreedy Matching, The findall() Method, Character Classes, Making Your Own Character Classes, The Caret and Dollar Sign Characters, The Wildcard Character, Review of Regex Symbols, Case-Insensitive Matching, Substituting Strings with the sub() Method, Managing Complex Regexes, Combining re.IGNORECASE, re.DOTALL, and re.VERBOSE, Project: Phone Number and Email Address Extractor, **Reading and Writing Files**, Files and File Paths, The os.path Module, The File Reading/Writing Process, Saving Variables with the shelve Module, Saving Variables with the pprint.pformat() Function, Project: Generating Random Quiz Files, Project: Multiclipboard, **Organizing Files**, The shutil Module, Walking a Directory Tree, Compressing Files with the zipfile Module, Project: Renaming Files with American-Style Dates to European-Style Dates, Project: Backing Up a Folder into a ZIP File, **Debugging**, Raising Exceptions, Getting the Traceback as a String, Assertions, Logging, IDLE's Debugger.

**Textbook 1: Chapters 7 – 10**

| <b>Mandatory Note:</b>  |  |
| Distribution of CIE Marks is a follows (Total 40 Marks):  |  |
| <ul style="list-style-type: none"> <li>• 20 Marks through IA Tests</li> <li>• 20 Marks through practical assessmen</li> </ul>   |  |
| <b>Maintain a copy of the report for verification during LIC visit.</b>   |  |
| <b>Possible list of practicals:</b>   |  |
| <ol style="list-style-type: none"> <li>1. Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.</li> <li>2. Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.</li> <li>3. Write a JavaScript code that displays text "TEXT-GROWING" with increasing font size in the interval of 100ms in RED COLOR, when the font size reaches 50pt it displays "TEXT-SHRINKING" in BLUE color. Then the font size decreases to 5pt.</li> <li>4. Develop and demonstrate a HTML5 file that includes JavaScript script that uses functions for the following problems: <ol style="list-style-type: none"> <li>a. Parameter: A string</li> <li>b. Output: The position in the string of the left-most vowel</li> </ol> </li> </ol> |  |

- c. Parameter: A number
  - d. Output: The number with its digits in the reverse order
5. Design an XML document to store information about a student in an engineering college affiliated to VTU. The information must include USN, Name, and Name of the College, Programme, Year of Joining, and email id. Make up sample data for 3 students. Create a CSS style sheet and use it to display the document.
6. Write a PHP program to keep track of the number of visitors visiting the web page and to display this count of visitors, with proper headings.
7. Write a PHP program to display a digital clock which displays the current time of the server.
8. Write the PHP programs to do the following:
  - a. Implement simple calculator operations.
  - b. Find the transpose of a matrix.
  - c. Multiplication of two matrices.
  - d. Addition of two matrices.
9. Write a PHP program named states.py that declares a variable states with value "Mississippi Alabama Texas Massachusetts Kansas". write a PHP program that does the following:
  - a. Search for a word in variable states that ends in xas. Store this word in element 0 of a list named statesList.
  - b. Search for a word in states that begins with k and ends in s. Perform a case-insensitive comparison. [Note: Passing re.I as a second parameter to method compile performs a case-insensitive comparison.] Store this word in element1 of statesList.
  - c. Search for a word in states that begins with M and ends in s. Store this word in element 2 of the list.
  - d. Search for a word in states that ends in a. Store this word in element 3 of the list.
10. Write a PHP program to sort the student records which are stored in the database using selection sort.

**MOBILE APPLICATION DEVELOPMENT**  
**(Effective from the academic year 2018 -2019)**  
**SEMESTER – VI**

|                                      |                 |                   |    |
|--------------------------------------|-----------------|-------------------|----|
| <b>Course Code</b>                   | <b>18CSMP68</b> | <b>IA Marks</b>   | 40 |
| <b>Number of Contact Hours/Week</b>  | 0:0:2           | <b>Exam Marks</b> | 60 |
| <b>Total Number of Contact Hours</b> | 3 Hours/Week    | <b>Exam Hours</b> | 03 |

**CREDITS – 02**

**Laboratory Objectives:**This laboratory (18CSMP68) will enable students to

- Learn and acquire the art of Android Programming.
- Configure Android studio to run the applications.
- Understand and implement Android's User interface functions.
- Create, modify and query on SQLite database.
- Inspect different methods of sharing data using services.

**Descriptions (if any):**

1. The installation procedure of the Android Studio/Java software must be demonstrated and carried out in groups.
2. Students should use the latest version of Android Studio/Java/ Kotlin to execute these programs. Diagrams given are for representational purposes only, students are expected to improvise on them.
3. **Part B programs should be developed as an application and are to be demonstrated as a mini project in a group by adding extra features or the students can also develop their application and demonstrate it as a mini-project. (Projects/programs are not limited to the list given in Part B).**

**Programs List:**

**PART – A**

|          |  |
|----------|--|
| <b>1</b> | <p>Create an application to design a Visiting Card. The Visiting card should have a company logo at the top right corner. The company name should be displayed in Capital letters, aligned to the center. Information like the name of the employee, job title, phone number, address, email, fax and the website address is to be displayed. Insert a horizontal line between the job title and the phone number.</p> <div style="text-align: center; margin: 20px 0;">  </div> |
| <b>2</b> | <p>Develop an Android application using controls like Button, TextView, EditText for designing a calculator having basic functionality like Addition, Subtraction, Multiplication, and Division.</p>   |

### SIMPLE CALCULATOR

Result

Input <Edit Text>

|   |   |   |   |
|---|---|---|---|
| 7 | 8 | 9 | / |
| 4 | 5 | 6 | * |
| 1 | 2 | 3 | - |
| . | 0 | = | + |
| C |   |   |   |

3 Create a SIGN Up activity with Username and Password. Validation of password should happen based on the following rules:

- Password should contain uppercase and lowercase letters.
- Password should contain letters and numbers.
- Password should contain special characters.
- Minimum length of the password (the default value is 8).

On successful **SIGN UP** proceed to the next Login activity. Here the user should **SIGN IN** using the Username and Password created during signup activity. If the Username and Password are matched then navigate to the next activity which displays a message saying “Successful Login” or else display a toast message saying “Login Failed”. The user is given only two attempts and after that display a toast message saying “Failed Login Attempts” and disable the SIGN IN button. Use Bundle to transfer information from one activity to another.

### SIGNUP ACTIVITY

Username:

Password:

SIGN UP

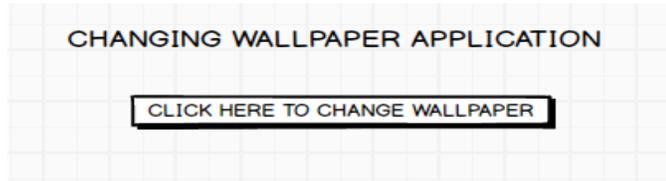

### LOGIN ACTIVITY

Username:

Password:

SIGN IN

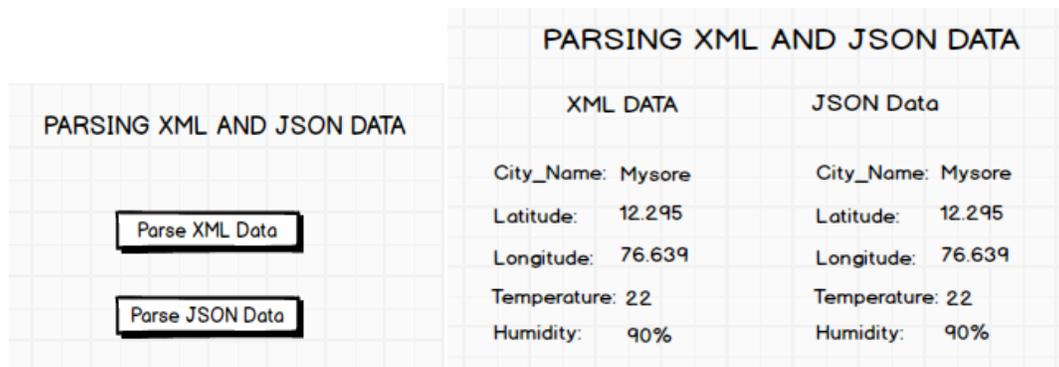

**4** Develop an application to set an image as wallpaper. On click of a button, the wallpaper image should start to change randomly every 30 seconds.

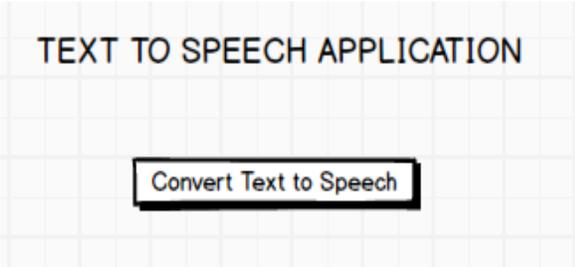

**5** Write a program to create an activity with two buttons START and STOP. On pressing of the START button, the activity must start the counter by displaying the numbers from One and the counter must keep on counting until the STOP button is pressed. Display the counter value in a TextView control.

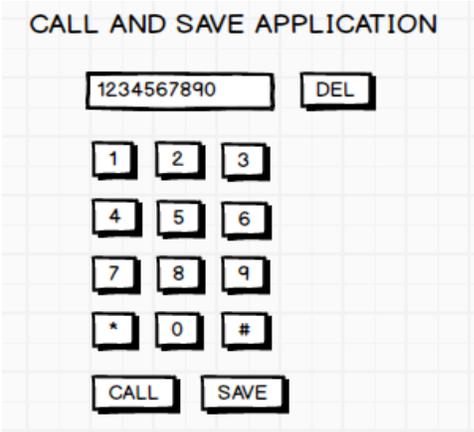

**6** Create two files of XML and JSON type with values for City\_Name, Latitude, Longitude, Temperature, and Humidity. Develop an application to create an activity with two buttons to parse the XML and JSON files which when clicked should display the data in their respective layouts side by side.

**7** Develop a simple application with one EditText so that the user can write some text in it. Create a button called “Convert Text to Speech” that converts the user input text into voice.

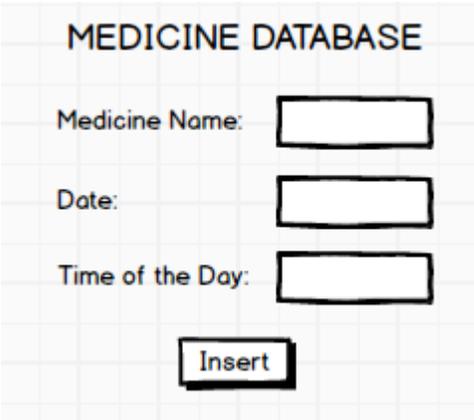

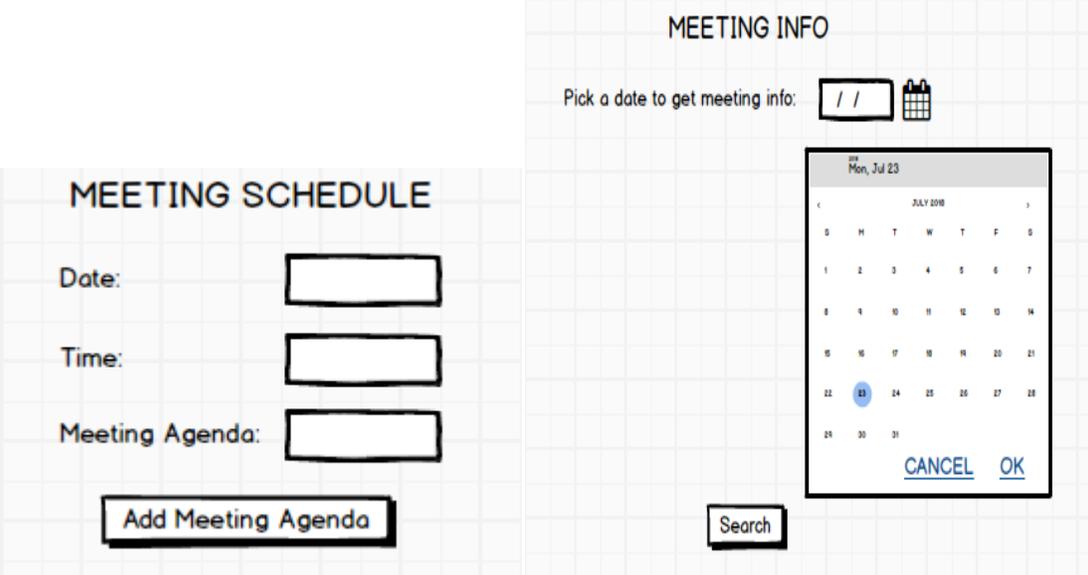

**8** Create an activity like a phone dialer with CALL and SAVE buttons. On pressing the CALL button, it must call the phone number and on pressing the SAVE button it must save the number to the phone contacts.

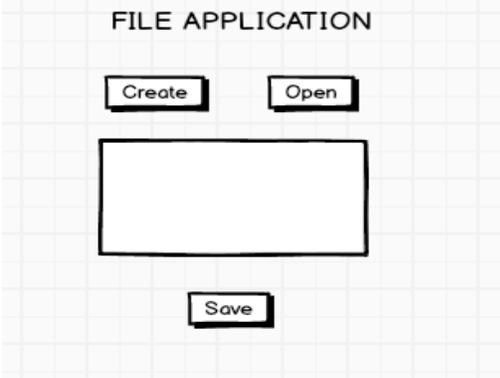

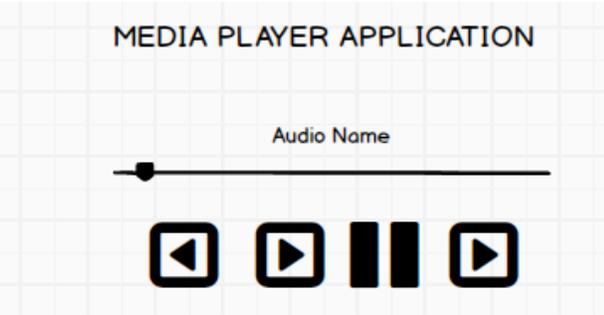

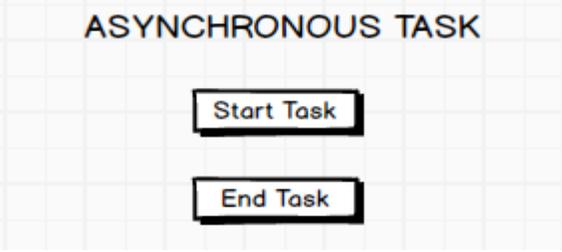

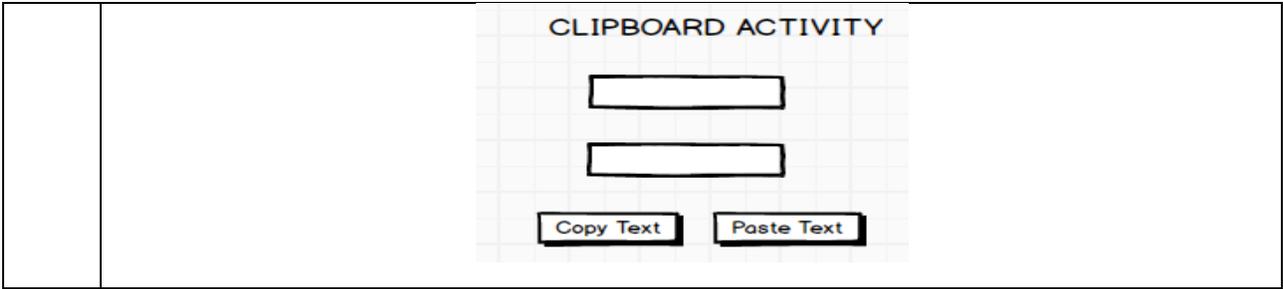

**PART - B**

**1** Write a program to enter Medicine Name, Date and Time of the Day as input from the user and store it in the SQLite database. Input for Time of the Day should be either Morning or Afternoon or Evening or Night. Trigger an alarm based on the Date and Time of the Day and display the Medicine Name.

|          |   |
|----------|---|
| <p>2</p> | <p>Develop a content provider application with an activity called “Meeting Schedule” which takes Date, Time and Meeting Agenda as input from the user and store this information into the SQLite database. Create another application with an activity called “Meeting Info” having DatePicker control, which on the selection of a date should display the Meeting Agenda information for that particular date, else it should display a toast message saying “No Meeting on this Date”.</p>  <p>The image shows two screenshots of an Android application. The left screenshot, titled "MEETING SCHEDULE", features three text input fields labeled "Date:", "Time:", and "Meeting Agenda:", each with a corresponding empty text box. Below these fields is a button labeled "Add Meeting Agenda". The right screenshot, titled "MEETING INFO", shows a date picker interface. It includes the text "Pick a date to get meeting info:" followed by a date input field containing " / /" and a calendar icon. A calendar widget is displayed, showing the month of July 2018 with the 23rd selected. Below the calendar is a "Search" button.</p> |
| <p>3</p> | <p>Create an application to receive an incoming SMS which is notified to the user. On clicking this SMS notification, the message content and the number should be displayed on the screen. Use appropriate emulator control to send the SMS message to your application.</p>  <p>The image shows a screenshot of an Android application titled "SMS APPLICATION". It contains two buttons: "Display SMS Number" and "Display SMS Message".</p>   |
| <p>4</p> | <p>Write a program to create an activity having a Text box, and also Save, Open and Create buttons. The user has to write some text in the Text box. On pressing the Create button the text should be saved as a text file in Mksdcard. On subsequent changes to the text, the Save button should be pressed to store the latest content to the same file. On pressing the Open button, it should display the contents from the previously stored files in the Text box. If the user tries to save the contents in the Textbox to a file without creating it, then a toast message has to be displayed saying “First Create a File”.</p>  |

|          |   |
|----------|---|
|          |   |
| <p>5</p> | <p>Create an application to demonstrate a basic media player that allows the user to Forward, Backward, Play and Pause an audio. Also, make use of the indicator in the seek bar to move the audio forward or backward as required.</p>    |
| <p>6</p> | <p>Develop an application to demonstrate the use of Asynchronous tasks in android. The asynchronous task should implement the functionality of a simple moving banner. On pressing the <b>Start Task</b> button, the banner message should scroll from right to left. On pressing the <b>Stop Task</b> button, the banner message should stop. Let the banner message be “Demonstration of Asynchronous Task”.</p>  |
| <p>7</p> | <p>Develop an application that makes use of the clipboard framework for copying and pasting of the text. The activity consists of two EditText controls and two Buttons to trigger the copy and paste functionality.</p>  |

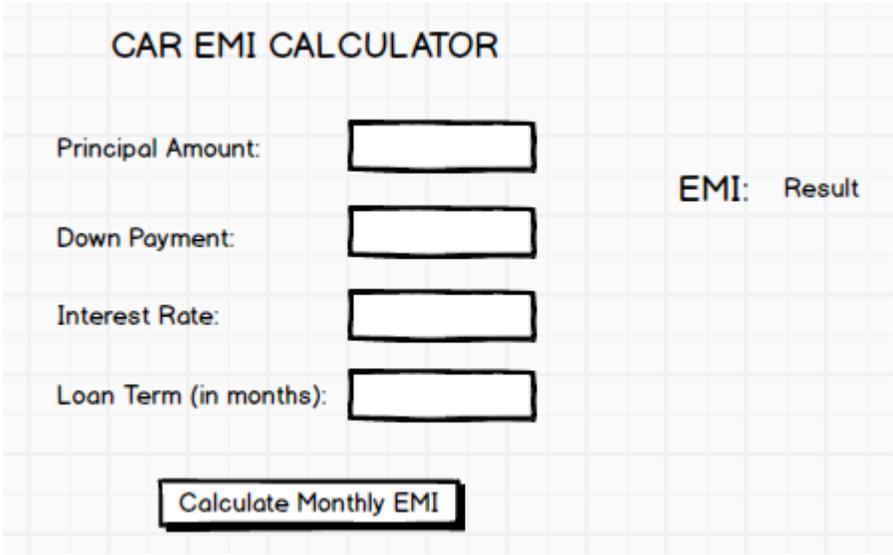

8 Create an AIDL service that calculates Car Loan EMI. The formula to calculate EMI is

$$E = P * (r(1+r)^n)/((1+r)^n-1)$$

where

- E = The EMI payable on the car loan amount
- P = The Car loan Principal Amount
- r = The interest rate value computed on a monthly basis
- n = The loan tenure in the form of months

The down payment amount has to be deducted from the principal amount paid towards buying the Car. Develop an application that makes use of this AIDL service to calculate the EMI. This application should have four EditText to read the PrincipalAmount, Down Payment, Interest Rate, Loan Term (in months) and a button named as “Calculate Monthly EMI”. On click of this button, the result should be shown in a TextView. Also, calculate the EMI by varying the Loan Term and Interest Rate values.

**Laboratory Outcomes:**After studying these laboratory programs, students will be able to

- Create, test and debug Android application by setting up Android development environment.
- Implement adaptive, responsive user interfaces that work across a wide range of devices.
- Infer long running tasks and background work in Android applications.
- Demonstrate methods in storing, sharing and retrieving data in Android applications.

- Infer the role of permissions and security for Android applications.

### Procedure to Conduct Practical Examination

- Experiment distribution
  - For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
  - For laboratories having PART A and PART B: Students are allowed to pick one experiment from PART A and one experiment from PART B, with equal opportunity.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (Course to change in accordance with university regulations)
  - For laboratories having only one part – Procedure + Execution + Viva-Voce: 15+70+15= 100 Marks
  - For laboratories having PART A and PART B
    - i. Part A – Procedure + Execution + Viva = 6 + 28 + 6 = 40 Marks
    - ii. Part B – Procedure + Execution + Viva = 9 + 42 + 9 = 60 Marks

| <b>Module 1</b>  |               |                   | <b>Contact Hours</b> |
| What is artificial intelligence?, Problems, problem spaces and search, Heuristic search techniques<br><b>Textbook 1: Chapter 1, 2 and 3</b><br><b>RBT: L1, L2</b>  |               |                   | 10                   |
| <b>Module 2</b>  |               |                   |                      |
| Knowledge representation issues, Predicate logic, Representaiton knowledge using rules.<br>Concpet Learning: Concept learning task, Concpet learning as search, Find-S algorithm, Candidate Elimination Algorithm, Inductive bias of Candidate Elimination Algorithm.<br><b>Textbook 1: Chapter 4, 5 and 6</b><br><b>Textbook2: Chapter 2 (2.1-2.5, 2.7)</b><br><b>RBT: L1, L2, L3</b> |               |                   | 10                   |
| <b>Module 3</b>  |               |                   |                      |
| Decision Tree Learning: Introduction, Decision tree representation, Appropriate problems, ID3 algorith.<br>Aritifical Nueral Network: Introduction, NN representation, Appropriate problems, Perceptrons, Backpropagation algorithm.<br><b>Textbook2: Chapter 3 (3.1-3.4), Chapter 4 (4.1-4.5)</b><br><b>RBT: L1, L2, L3</b>   |               |                   | 10                   |
| <b>Module 4</b>  |               |                   |                      |
| Bayesian Learning: Introduction, Bayes theorem, Bayes theorem and concept learning, ML and LS error hypothesis, ML for predicting, MDL principle, Bates optimal classifier, Gibbs algorithm, Navie Bayes classifier, BBN, EM Algorithm<br><b>Textbook2: Chapter 6</b><br><b>RBT: L1, L2, L3</b>  |               |                   | 10                   |
| <b>Module 5</b>  |               |                   |                      |
| Instance-Base Learning: Introduction, k-Nearest Neighbour Learning, Locally weighted regression, Radial basis function, Case-Based reasoning.<br>Reinforcement Learning: Introduction, The learning task, Q-Learning.<br><b>Textbook 1: Chapter 8 (8.1-8.5), Chapter 13 (13.1 – 13.3)</b><br><b>RBT: L1, L2, L3</b>  |               |                   | 10                   |
| <b>Course Outcomes:</b> The student will be able to :  |               |                   |                      |
| <ul style="list-style-type: none"> <li>• Appaise the theory of Artificial intelligence and Machine Learning.</li> <li>• Illustrate the working of AI and ML Algorithms.</li> <li>• Demonstrate the applications of AI and ML.</li> </ul>   |               |                   |                      |
| <b>Question Paper Pattern:</b>   |               |                   |                      |
| <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full Question consisting of 20 marks</li> </ul>   |               |                   |                      |

- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Certificates, X-509 version 3, public key infrastructure . <b>User Authentication:</b> Remote user Authentication principles, Mutual Authentication, one way Authentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation , Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication. <b>Electronic Mail Security:</b> Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow.<br><b>Textbook 1: Ch. 14.4, Ch. 15.1 to 15.4, Ch.19</b><br><b>RBT: L1, L2</b> | 08 |
| <b>Module – 5</b>  |    |
| <b>IP Security:</b> IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service<br><br><b>Transport and tunnel modes,</b> combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits.<br><b>Textbook 1: Ch. 20.1 to 20.3</b><br><b>RBT: L1, L2</b>   | 08 |
| <b>Course outcomes:</b> The students should be able to:  |    |
| <ul style="list-style-type: none"> <li>• Define cryptography and its principles</li> <li>• Explain Cryptography algorithms</li> <li>• Illustrate Public and Private key cryptography</li> <li>• Explain Key management, distribution and certification</li> <li>• Explain authentication protocols</li> <li>• Tell about IPsec</li> </ul>  |    |
| <b>Question paper pattern:</b>   |    |
| <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• There will be 2 questions from each module.</li> <li>• Each question will have questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>  |    |
